

Unicast Cooler Parts

Best Fit. Lowest Installation Costs.

Unicast Cooler Parts are designed for maximum wearlife at a minimum cost in downtime and waste. Superior quality alloys combined with unique cost-saving features deliver these significant benefits:

No Grinding Required Cooler Grates

Unicast Cooler Grates are precision cast using high integrity molding methods producing an excellent surface finishing and absolute dimensional control. A right fit every time, no machining or grinding required. Alloys of S3 and S4 heat resistant steel ensure high heat strength from 900-2100 degrees F.

Available in a variety of styles: RFT, CFG, and flat panel grates.

Replace Half Wearpart Only 2-Piece Side Castings

These two-piece side castings allow replacement of the worn surfaces in the hot zone with only minor disruption of the refractory, providing major labor savings when maintenance is required. The base casting is produced in a low cost heat resistant iron and the wear plate is produced in stainless alloy S3. This combination reduces the overall cost when compared to a one piece casting.
