

Unicast Grinding Mill Parts

Optimized Wearlife

Unicast Grinding Mill Parts combined provide a complete system for optimized wearlife of grinding mill parts with cost savings and minimum downtimes. Here's how:

Customized to Perform Grinding Mill Liners

From Feed Head to Discharge End, Unicast Custom-Made Liners optimize mill performance. Our engineers offer on-site measurement to provide a perfect-fit design and alloy selection to suit your application. Unicast is dedicated to providing high quality products at reduced overall installation and maintenance costs.

Optimum Fit Grates

Our Head Liners, Partition and Discharge Grates are designed for efficient mill performance with reduced maintenance needs. Cast in martensitic chrome-moly steels with a 350 to 450 BHN hardness, Unicast Grates are cast for high strength and optimum fit.

Cast for Abrasion Resistance Shell Liners

Unicast Shell Liners are cast in materials ranging from chrome-moly steels to high chrome white iron. A minimum hardness of 450 to over 650 BHN ensures maximum strength and a significantly longer wearlife. We offer Shell Liners in **single**, **multi-lift** and **classifying styles** for efficient grinding performance.

Availability and Convenience Bolt Kit

Unicast standard and direct replacement OEM bolt kits available.

**Sales Office
and Plant
CANADA**
