

Unicast Hammer Mill Parts Tough. Durable. Cost-Efficient.

Unicast Hammer Mill Parts are designed to provide a dramatic increase in wearlife resulting in significant cost savings. Personalized attention to your application needs provides these long-lasting benefits:

Dramatic Increase in Wearlife

One-Piece Hammers

A recent Unicast innovation resulted in a wearlife improvement of 350% on the hammers in a Penn 7620 hammer-mill from 26 weeks to 22 months.

New! Unicast offers design and wearlife analysis with three common alloys for improved wearlife: M2, M2 with tungsten carbide insert, and WR1 cast quench and tempered steel.

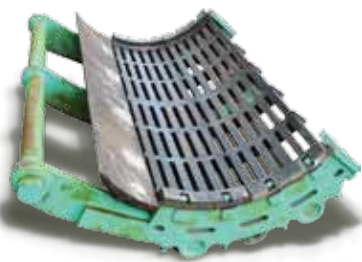

Optional chrome carbide overlay available for M2 and WR1 materials for extended life.

Over 60% Cost Reduction

End Liners

Unicast WR3 end liners are cast to include welded supports and bolt protectors at a hardness greater than typical fabricated steel plate. Additional hardsurfacing is added to the high exposure areas to balance overall wear.

Cast to Last

Breaker Blocks & Cage Assemblies

Mono-block eliminates multiple cage bars. Wears longer. Saves time.

Precision Balanced

Crusher Rotor Assembly

One-piece cast disks, precision balanced to eliminate vibration which causes excess bearing damage. Wear resistant WR3 for longer wearlife.
