

End Liners

Unicast hammermill end liners are designed for extreme wear life in demanding conditions.

UNICAST HAMMERMILL END LINERS

Unicast Hammermill End Liners are cast to include welded supports and bolt protectors for longest wear life.

The casting process allows for the selection of WR3, a heavy-duty alloy with significantly greater wear life than fabricated steel plate. One-piece casting delivers over 60% cost reduction. Saves time and labor.

Additional hard surfacing is added to the high exposure areas to balance overall wear.
